

## AUTOMATIC BACKLATCH DEVICE ADAPTABLE TO OVERLOCK MACHINES (3 THREAD / 1 NEEDLE or 4 THREAD / 2 NEEDLES.

This type of backlatch device is the simplest and the most efficient of the market.

1-needle overlock

2-needle overlock

### MAIN SPECIFICATIONS

**SIMPLICITY** No mechanics get in the working area thus enabling perfect backlatches on small articles.  
No electronics, fully pneumatic.

**VERY IMPORTANT:**

This device does not require an electronical positionor motor.  
A traditionnal motor is enough.

**QUALITY** No ball at the beginning of the backlatch.  
Small width sewing can be achieved.  
Does not gather the sewing when working with very fine fabrics.

**ECONOMICAL** Great thread savings unlike traditionnal devices that use a suction process at the end of sewing (any thread consumed is used onto the product, this is due to the special chain cutting device).

**FLEXIBILITY** This device is adaptable to most recent machines type JUKI, BROTHER, YAMATO, PEGASUS.

**APPLICATIONS** Underwear, garments, lingerie, corsetry .
