

## MACHINE FOR ATTACHING TAGS TO PRODUCT BY PLASTIC STAPLE

*The D.E.S.P.ST9000. consists of : 1 automatic feeder for flat labels or tags and 1 ST9000 DENNISON head specially adapted for this operation.*

### **FLEXIBILITY**

Tag is affixed flat on garment in any places either with 1 or several plastic staples (see schemes).

Automatic **DESP** feeder for flat labels is adjustable in a matter of seconds and designed for using various-shaped labels & tags of any sizes.

*Capable of working with or without feeding device for pinning and pairing operations, and for any application where metal staples or bar tacking is used.*

**QUALITY** : Reliably feeds plastic staples (double T-end fasteners) through ultra-fine needles from a continuous reel of 20 000 staples which can be applied to even the most delicate fabrics. The flexible design of this unit ensures that the label (or tag & ticket) remains tightly attached to the garment while on display, and the tag is easily removed by the consumer when the garment is ready to use.

*Very fast adjustments - Entire operation is under programmed electronic & pneumatic control -*

**APPLICATIONS** : *garments, fine socks, house-linen, lingerie, corsetry ...*

**This very complete unit ensures very efficient production runs without breakage or downtime.**
