

AUTOMATIC UNIT FOR ATTACHING RIDER LABELS BY SEWING TO SOCKS, CORSETRY, UNDERWEAR, HOUSEHOLD LINEN ETC.

This assembly consists of a special TECMA sewing machine "Junior" type, an automatic rider label feeder (for any size or shape of rider labels).

This device enables to feed rider labels, fold them, and fasten them by a sewing stitch onto products like socks, underwear, home textiles etc.

FLEXIBILITY

Adjustments for changing label size and shape are achieved very rapidly (about 10 seconds) by the operator without using a set of tools.

2 types of display can be achieved when this machine is used for rider label attaching :

- complete insertion of the product in the rider label (see diagram n°1).
- partial insertion of the product in the rider label (see diagram n°2).

A special version has been engineered in order to be able to attach rider labels in a leaflet style : see diagram n°3 and brochure DEC.BP. Ref.n°3.

APPLICATIONS : underwear, corsetry, garments, swimwear, socks, household linen, etc.

EASINESS : very simple use and maintenance.

QUALITY : thanks to the device for anti crushing / anti marking of label . Device for anti cut of label with flexible sewing stitch anti damage to products.

PRODUCTIVITY : up to 1000 labels attached / hour. May vary according to duration of the production runs, workstation type, and operator skill.
