

## NEW PACKAGING MACHINE FOR KNIVES THAT ARE HANGED UP IN THE RETAIL

**NEW**

**This machine originally** enables to easily and rapidly fasten the knives onto a plastic or cardboard header card display fitted with one or several pre-cut slots for holding the knives blade in position **(see diagrams)** thanks to the following devices:

A first device slightly opens the slot(s) for facilitating the blade introduction underneath, as this operation is time consuming and difficult.

A second device applies the rider plastic fasteners for fastening the knife at the required places onto the header card.

**ECONOMICAL :** Replaces plastic shells type blister that are very expensive.

**FLEXIBLE :** This device can apply plastic fasteners of different lengths to adapt to all product sizes.

**SIMPLE :** Simple of installation, operation and maintenance.  
Does not require a specifically qualified personnel.

**QUALITY :** No header card or product damage.  
Excellent display enabling consumers to touch the product.

**SAFETY :** Operator safety device.

**PRODUCTIVITY:** About 350 pieces /hour varying according to operator skill, production series volume and workstation organization.

**APPLICATIONS:** Cutlery, small cooking utensils, tools.
