

MACHINE FOR SEWING RIDER LABELS, DECORATIVE ELEMENTS, BOWS OR SIMILAR PRODUCTS WITH PROGRAMMING OF THE SEWING STITCH TYPES

NEW

n°1

ORIGINALITY :

Thanks to an electronic programming this machine allows to achieve in a chain different types of sewing stitches.

Example: sewing bow(s) with one or several stitches of the same type (adjustable: stitch length, number of stitch per sewing, sewing speed) and right after sewing a rider label with other stitch features. The COMPLETE SEQUENCE BEING ELECTRONICALLY MEMORIZED

This assembly consists of :

- A sewing head with electronic programming.
- An automatic rider label dispenser (diagram n° 1)
- A special presser foot device with its device for sewing bows or decorative elements (diagram n° 2)
- An electronic variator for adjusting the machine rotation which can go very low, resulting in reducing problems of cuts or holes on delicate articles.

The feature of this device consists in being flexible, as it allows to achieve in a chain several operations with different stitch types on a same article, without using tools by the operator, resulting in a very flexible use of this machine thanks to its programmable sequencer.

Application : socks, corsetry, underwear, garments etc.
